

Inventory & Supply Chain Management Analysis

Executive Performance Report & Strategic Recommendations | Powered by Power BI

1. Executive Summary

This report provides an analytical evaluation of global supply chain operational performance, focusing heavily on warehouse space utilization, regional logistics spending, fulfillment status, and inventory velocity. By processing operational metrics across diverse product streams (Accessories, Clothing, Electronics, Furniture), this report establishes strategic solutions aimed at reducing cancellations, stabilizing lead times, and enhancing overall inventory health.

2. Core KPI Operational Benchmarks

Key Performance Indicator (KPI)	Value Captured	Strategic Interpretation & Health Status
Warehouse Utilization	34.08%	Extremely low utilization rate. Indicates massive storage headroom, offering opportunity for strategic inventory staging or regional consolidation.
Days Sales of Inventory (DSI)	15.56 Days	Highly agile. Average turnover cycle is just over two weeks, reflecting stellar demand-to-fulfillment speeds for quick-moving SKUs.
Inventory Turnover Ratio	23.47x	Strong capital efficiency metrics. Stock refreshes approximately 23.5 times annually, signaling minimal working capital lockup.

3. Regional & Functional Diagnostics

Logistics & Transportation Costs:

- The **West and North regions** emerge as the principal logistics expense drivers across all zones.
- Product-specific overhead highlights that **Furniture** yields top-tier transportation outlays in the West, while **Clothing** demands maximum budget allocations within the North.

Fulfillment Reliability & Flow Deficits:

- System pipelines currently contain **838 Fulfilled orders** alongside a critical volume of **248 Pending orders**.
- A hard leak of **114 Canceled orders** suggests localized out-of-stock events or operational order-processing drops.

Supplier Lead Times:

- The global operational lead time sits stable at an average of **15.74 days**.
- High uniformity across categories is evident, with minor discrepancies spanning from a low of **15.50 days (24.57%)** up to a maximum peak of **16.60 days (26.32%)**.

4. Strategic Action Roadmap

Focus Dimension	Data Insight Grounding	Immediate Actionable Strategy
Warehouse Expansion	34.08% capacity used.	Reallocate empty floor real estate to accept high-margin, bulk furniture buys or absorb localized hub overflows.
Logistics Rationalization	West/North costs spiking.	Renegotiate zone-specific carrier contracts and enforce consolidation frameworks for high-cube weight categories.
Fulfillment Recovery	114 orders canceled.	Deploy real-time order tracking triggers to flags bottlenecks before automated system expiration or manual cancel steps.
